

## WARRANTY

According to German law there is a legal warranty of two years on all of our products.

Please be aware of the fact, that the following aspects, that are not restricting the usability of the products or can appear during the product life cycle (f.i. as sign of wear), are no defect and therefore no warranty case:

- **aesthetic phenomenons** (f.i. insignificant or hidden defective appearance)
- **thermic conditioned discolouration/staining** on stainless steel, titan, aluminium and carbon exhaust systems
- **symptom of old age** (f.i. desaturation of lacquered or metallic surface)
- **discolouration due to condensation water**

**FECHTER DRIVE** reserves the right to refuse the completion of warranty claims, if there were technical changes compared to the motorcycle's original state made (f.i. mounting of our accessory parts in combination with accessory or original suitcases, external accessory parts, motor tuning etc.), the products were used in another than the particular purpose or were excessively used due to disregarding important mounting notes, service and inspection interval as well as security notes.

## CLEANING & CARE

To enjoy your motorcycle accessory parts for a long time, **regular cleaning and care** are very important. Especially after rides in winter, in rain or in saline air (f. i. inshore) you should clean and service your accessory parts adequately, because water and salt can result in an accelerated corrosion.

You can remove staining best with a **clean soft sponge** and **warm water**.

Wash up the dirt with a soft water-jet (attention: washing up with a high pressure water-jet, f.i. the use of a steam cleaner, can damage the product).

Do not use any alkaline or acidic cleanser such as solvent, benzine, rust-prevention, removal cleanser or the like. These cleanser act aggressively towards plastics and rubbers and attack metallic surfaces, so that early corrosion could be caused.

- **Chrome plated parts** can be polished with a standard chrome polish after cleaning. Additionally, a preservation with spray oil or spray wax is recommended.
- On **stainless steel exhaust systems** thermic conditioned discolouration and persistent staining can occur. These can be removed with a standard polish after cleaning.
- **Coated surfaces** can be protected by using a standard finish conserver.
- **Aluminium accessories** can be polished with a standard aluminium polish.
- **Leather products** should be oiled with a standard leather grease after cleaning.
